Earlier training comparison
1/8 had a small final loss advantage
Original measurements
3 saved states from the 1/4 run
Remaining question
Why did 1/8 perform better?
7 added experiments address the gaps
3 motivating checkpoints
1/8 run: early, middle, late
2 wider measurements
12 directions retained within a set of 48
2 optimizer controls
Fresh histories and local loss tests
All 7 completed at fixed checkpoints. No new training runs.
